

## MOUNTING GUIDE

- 1** Place GripFixer correctly in your hand.
- 2** Press the racketshaft into the opening of the GripFixer.
- 3** Apply light pressure in the opening - e.g. insert the thumb.
- 4** Pull the GripFixer down to the rackethandle (avoid unnecessary roughness when pulling the GripFixer). Pull it down to about halfway, however it may vary depending on hand size.
- 5** Make sure the opening is aligned with the racketframe. Adjust GripFixer (counter) clockwise, until it is placed correctly. Apply light pressure in the opening (as shown in section 3), for easier adjustment of GripFixer.
- 6** Place your fingers. The thumb in between the two "rings" to the left, and the pointer in between the two "rings" to the right. The rest of the fingers are placed beneath the lower ring. (Right handed)
